Weights and dimensions shown are approximate. Specifications and appearance are subject to change without notice.

- The projector uses a type of liquid crystal panel that typically consists of millions of pixels. This panel is built with very high-precision technology to provide the finest possible image. Occasionally, a few pixels may remain turned on (bright) or turned off (dark). Please note that this is an intrinsic characteristic of the manufacturing technology that affects all products using LCD technology.
- The projector uses a high-voltage mercury lamp that contains high internal pressure. This lamp may break, emitting a large sound, or fail to illuminate, due to impact or extended use. The length of time that it takes for the lamp to break or fail to illuminate varies greatly depending on individual lamp characteristics and usage conditions.
- Measurement, measuring conditions, and method of notation all comply with ISO 21118 international standards.
- In dynamic mode, with dynamic iris on.
- In cinema 1 mode, with dynamic iris on.
- Shift range is limited during simultaneous horizontal and vertical shifting.
- Effective in Rec. 709 picture mode.
- CEC is an abbreviation for Consumer Electronics Control. Operation may not be possible with some connected equipment or settings. \*8
- With legs at shortest position.
- \*10 Average value. May differ depending on models.
- \*11 Operation range differs depending on environments.
- \*12 If you do not have a Panasonic 3D TV that supports 3D video, use a charger that has a USB2.0 port for charging your Eyewear. The recommended charger is Apple USB Power Adapter for iPhone. The code at the end of the model number of 3D Eyewear may differ depending on the country of purchase.

#### Standard setting-up position

#### NOTE:

Illustrations show the projector installed using optional ceiling mount bracket ET-PKA110S.

This illustration is not drawn to scale.

#### Caution:

- All construction work should be done by a qualified technician.
- When mounting to the ceiling, use the special mounting bracket. To prevent the projector from dropping, attach the wire that is included with the projector between the mounting bracket and the ceiling.

## Calculation of the projection distance

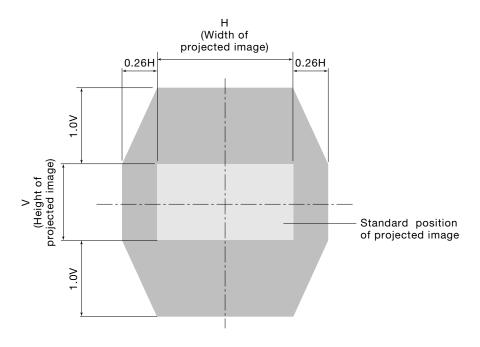

For a screen size different from the above, use the equation below to calculate the projection distance.

16:9	minimum	L (m) = (diagonal screen size in inches) $\times$ 0.0302 - 0.045
	maximum	L (m) = (diagonal screen size in inches) $\times$ 0.0604 - 0.044
2.35:1	minimum	L (m) = (diagonal screen size in inches) × 0.0319 - 0.045
	maximum	L (m) = (diagonal screen size in inches) × 0.0638 - 0.044
2.35:1 (When projecting	ng both 2.35:1 an	d 16:9 images onto a 2.35:1 screen using the Lens Memory function.)
` ' '	minimum	L (m) = (diagonal screen size in inches) × 0.0241 - 0.045
	maximum	L (m) = (diagonal screen size in inches) × 0.0482 - 0.044

NOTE: The accuracy of calculated value by the formula shown above is  $\pm 5\%$ .

## Shift range

Optical axis shift function allows to shift the position of a projected image as shown below.

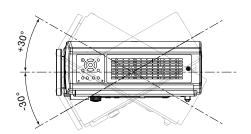

## Installable angle

Install the projector at an angle within the range shown below.

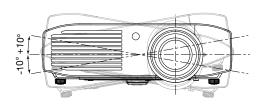

#### • Vertical direction

The projector may be installed at a vertical angle of  $\pm 30^{\circ}$ .

#### • Horizontal direction

The projector may be installed at a horizontal angle of  $\pm 10^{\circ}$ .

## List of compatible signals

The signals that can be input to this projector are shown in the table below. Horizontal scanning frequencies of 15 kHz to 74 kHz, vertical scanning frequencies of 24 Hz to 85 Hz, and a dot clock of 154 MHz maximum can be input.

## Supported 3D video signal list

When [3D INPUT FORMAT] is set to [AUTO], the 3D signals supported by this projector are the HDMI signals in the table below.

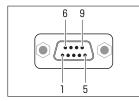

Mode	Format of 3D video signals		
	Frame packing	Side by side	Top and bottom
750 (720)/60p	Yes*1	Yes	Yes *1
750 (720)/50p	Yes*1	(Yes)*2	Yes *1
1125 (1080)/60i	_	Yes *1	_
1125 (1080)/50i	_	Yes *1	_
1125 (1080)/24p	Yes*1	Yes	Yes *1
1125 (1080)/60p	-	Yes	_
1125 (1080)/50p	_	(Yes)*2	_

<sup>\*1</sup> Indicates a 3D mandatory format signal that meets the HDMI standards.
\*2 3D display is possible when [3D INPUT FORMAT] is set to [SIDE BY SIDE].

#### Serial connector

The serial connector complies with RS-232C. To control the projector from a personal computer, commands must be input through communication software, based on the format and satisfying the communication conditions shown below.

#### Pin assignments and signal names

No.	Signal name	Description	No.	Signal name	Description
1	_	NC	6	_	NC
2	TXD	Transmitted data	7	RTS	Connected internally
3	RXD	Received data	8	CTS	Connected internally
4	_	NC	9	_	NC
5	GND	Ground			

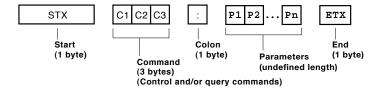

D-sub 9-pin (female) Serial input

#### Communication conditions (factory setting)

Signal level	RS-232C-compliant
Synchronization method	Start-stop synchronization
Baud rate	9,600 bps
Parity	None
Character length	8 bits
Stop bit	1 bit
X parameter	None
S parameter	None

#### **Basic format**

Transmission from the computer begins with STX, then command, parameter, and ETX are sent in this order. Add parameters according to the details of control.

#### CAUTION

- . When sending multiple commands, be sure to send the next command after receiving a response from the projector.
- STX and ETX are character codes. Expressed in hexidecimals, STX is 02 and ETX is 03.

<sup>\*1</sup> PON is the only command that is effective in standby mode; all other commands are invalid. The PON command is not accepted during lamp on control. After the lamp has been turned off and while the cooling fan is still operating, lamp on control will not be activated for about 85

seconds in order to protect the lamp.

\*2 Do not send OSH commands continuously in a short period of time. Doing so may burst the lamp or shorten the lamp replacement cycle.

<sup>\*3</sup> DIFI1=+00002 is unused.

NOTE: If a wrong command is received, the projector will send an ER401 command to the computer.

#### Command example

To set the input to HDMI 1, send the command as shown below.

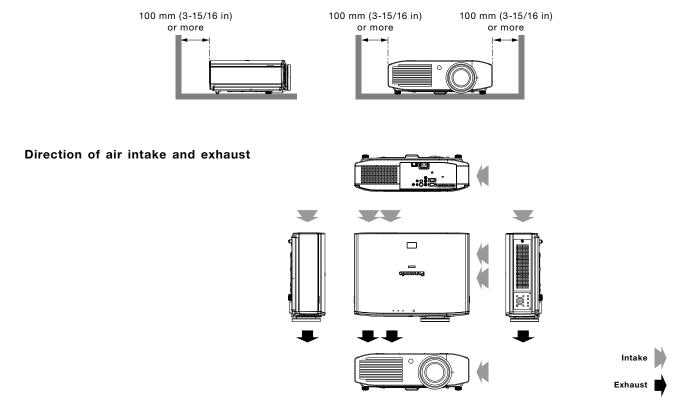

NOTE: When sending commands without parameters, a colon (:) is not necessary.

#### Notes on projector placement and operation

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

- 1. Never place objects on top of the projector while it is operating.
- 2. Make sure there is an unobstructed space of 100 mm (3-15/16 inches) or more around the projector's air intake openings.
- 3. If the projector is placed in a box or enclosure, ensure the temperature of the air surrounding the projector is between 0°C and 35°C (32°F and 95°F). Also make sure the projector's intake and exhaust openings are not blocked. Take particular care to ensure that hot air from the exhaust openings is not sucked into the intake openings.

## Operating the projector continuously

- If the projector is to be operated continuously 6 hours or more, lamp replacement cycle duration becomes shorter.
- 2. The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods.
